

ReflecTech Durability

Accelerated Weathering Testing Summary

ReflecTech® Mirror Film recently surpassed the 25 year mark demonstrating durability against ultraviolet (UV) radiation using the Ultra-Accelerated Weathering Station (UAWS) at the National Renewable Energy Laboratory (NREL).

UAWS is the most accelerated method to determine the long-term durability of a material to outdoor exposure. Natural sunlight is concentrated 100X while sample exposure temperatures are maintained at 30°C and 60°C to accelerate degradation mechanisms.

After receiving the equivalent cumulative UV dose of over 25 years outdoor exposure, no degradation and no loss in reflectance were measured in three replicate samples.
